The functions f and g, defined by $f(x) = 8x^2 - 2$ and $g(x) = -8x^2 + 2$, are graphed in the xy-plane above. The graphs of f and g intersect at the points (k, 0) and (-k, 0). What is the value of k?

$$y=x^2-a$$

C) 1

B)

In the equation above, a is a positive constant and the graph of the equation in the xy-plane is a parabola. Which of the following is an equivalent form of the equation?

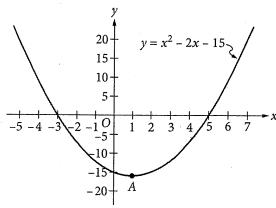

D) 2

$$A) \quad y = (x+a)(x-a)$$

B)
$$y = (x + \sqrt{a})(x - \sqrt{a})$$

C)
$$y = \left(x + \frac{a}{2}\right)\left(x - \frac{a}{2}\right)$$

$$D) \quad y = (x+a)^2$$

Which of the following is an equivalent form of the equation of the graph shown in the xy-plane above, from which the coordinates of vertex A can be identified as constants in the equation?

A)
$$y = (x+3)(x-5)$$

B)
$$y = (x-3)(x+5)$$

C)
$$y = x(x-2) - 15$$

D)
$$y = (x-1)^2 - 16$$

In the xy-plane, the graph of $y = 3x^2 - 14x$ intersects the graph of y = x at the points (0,0) and (a, a). What is the value of a?

$$h(x) = \frac{1}{(x-5)^2 + 4(x-5) + 4}$$

For what value of x is the function h above undefined?

(0.8)(1.08)

price of the computer in terms of p ? price. Which of the following represents the original including an 8 percent sales tax on the discounted amount she paid to the cashier was p dollars, 20 percent discount off its original price. The total Alma bought a laptop computer at a store that gave a

f(t) = 325(0.13)

 $f(t) = 325(0.87)^{3}$

$$f(t) = 0.87(325)^t$$
$$f(t) = 0.13(325)^t$$

grams, t years later models the remaining amount of the substance, in 325 grams, which of the following functions f13 percent. If the initial amount of the substance is A radioactive substance decays at an annual rate of
